EXPERIENCE

Freelance Front-End Developer

November 2024 - Present

Website - FoodFe

- Assisted with redesigning of admin website, enhancing the UI and developing components using React.js and Material UI for a modern, consistent look.
- Utilized Redux Toolkit for state management, handling cart operations, login state, user profile, and roles.
- Implemented Material Table for interactive data displays improving data accessibility and user engagement.
- Implemented React Query for efficient data fetching and optimizing API calls, improving performance and data handling.

PROJECTS

Web Chat Website

[link](#)

Tech Stack: Next.js, NextAuth.js, socket.io, MongoDB

- Developed a scalable chat application with private chat functionality for secure one-on-one messaging and a global chat room for real-time group conversations.
- Integrated authentication using NextAuth.js, ensuring secure and seamless user logins with OAuth.

Video Streaming Website

[link](#)

Tech Stack: React.js (React query, Context API, React routers), Express.js, Mongoose and Fetch Api

- Developed a video streaming platform that allows users to upload and watch content with an easy-to-use interface.
- Added features like user subscriptions, and the ability to like and comment on videos to increase engagement.

DIT UNIVERSITY — PROJECT (UniReuse)

[link](#)

Tech Stack: React Native, Express.js and Mongoose

- Integrated a marketplace feature for buying and selling second-hand products to promote sustainable spending.
- Addressed the financial management needs of college students by incorporating budgeting tools and expense tracking.
